<sup>2</sup>Faculty of Nursing, School of Health Sciences, University of Iceland

## BACKGROUND

One of the most difficult experiences in life for families is when a child is diagnosed with a chronic illness

Burden of the illness places a great demand on parents

Parents need support on an advanced level

## BACKGROUND

Nurses can contribute to soften sufferings and facilitate change to health problems

Family level intervention increases parents' perceptions for support and helps them better manage illness experience

(Kamban and Svavarsdottir, 2013; Konradsdottir and Svavarsdottir, 2011, 2013; Svavarsdottir, Sigurdardottir and Tryggvadottir, 2014)

## PURPOSE

The purpose of this study was to measure the benefits of **The Family Strength Oriented Therapeutic Conversation intervention (FAM-SOTC)**

offered by **advanced practice nurses for parents** of children and adolescents with newly diagnosed **juvenile idiopathic arthritis, epilepsy, diabetes and ADHD** with **sleep disturbance**

## GUIDING FRAMEWORKS

- The Calgary Family Assessment Model (CFAM)
- The Calgary Family Intervention Model (CFIM)
- Illness Beliefs Model

## INSTRUMENTS

- The Icelandic - Family Perceived Support Questionnaire (ICE - FPSQ)
- The PedsQL™\_Family Impact Module
- PedsQL™ - Health Care Satisfaction Generic Module
- The Icelandic Family Intervention Beliefs Questionnaires (ICE - FIBQ)
- Demographics and Child-Health Variables

## METHOD/SAMPLE

- A quasi-experimental pretest/posttest design
- Participants: Parents (N= 38) of children with newly diagnosed;
  - Juvenile Idiopathic Arthritis
  - Epilepsy
  - Diabetes
  - ADHD and sleep disorder
- Data collected march 2015-dec 2016

# THE FAM-SOTC INTERVENTION

## FIRST SESSION

- Family assessment
- Main concerns explored by using therapeutic questions
- Suffering acknowledged
- Emotional responses normalized
- Families strengths indicated
- Resourced indentified, information and advice offered

# THE FAM-SOTC INTERVENTION SECOND SESSION

- Revision made
- Parents encouraged to talk about change in daily life by using therapeutic questions
- Concerns and strengths acknowledge
- Resources discussed, information and advice offered

# RESULTS

Table 1

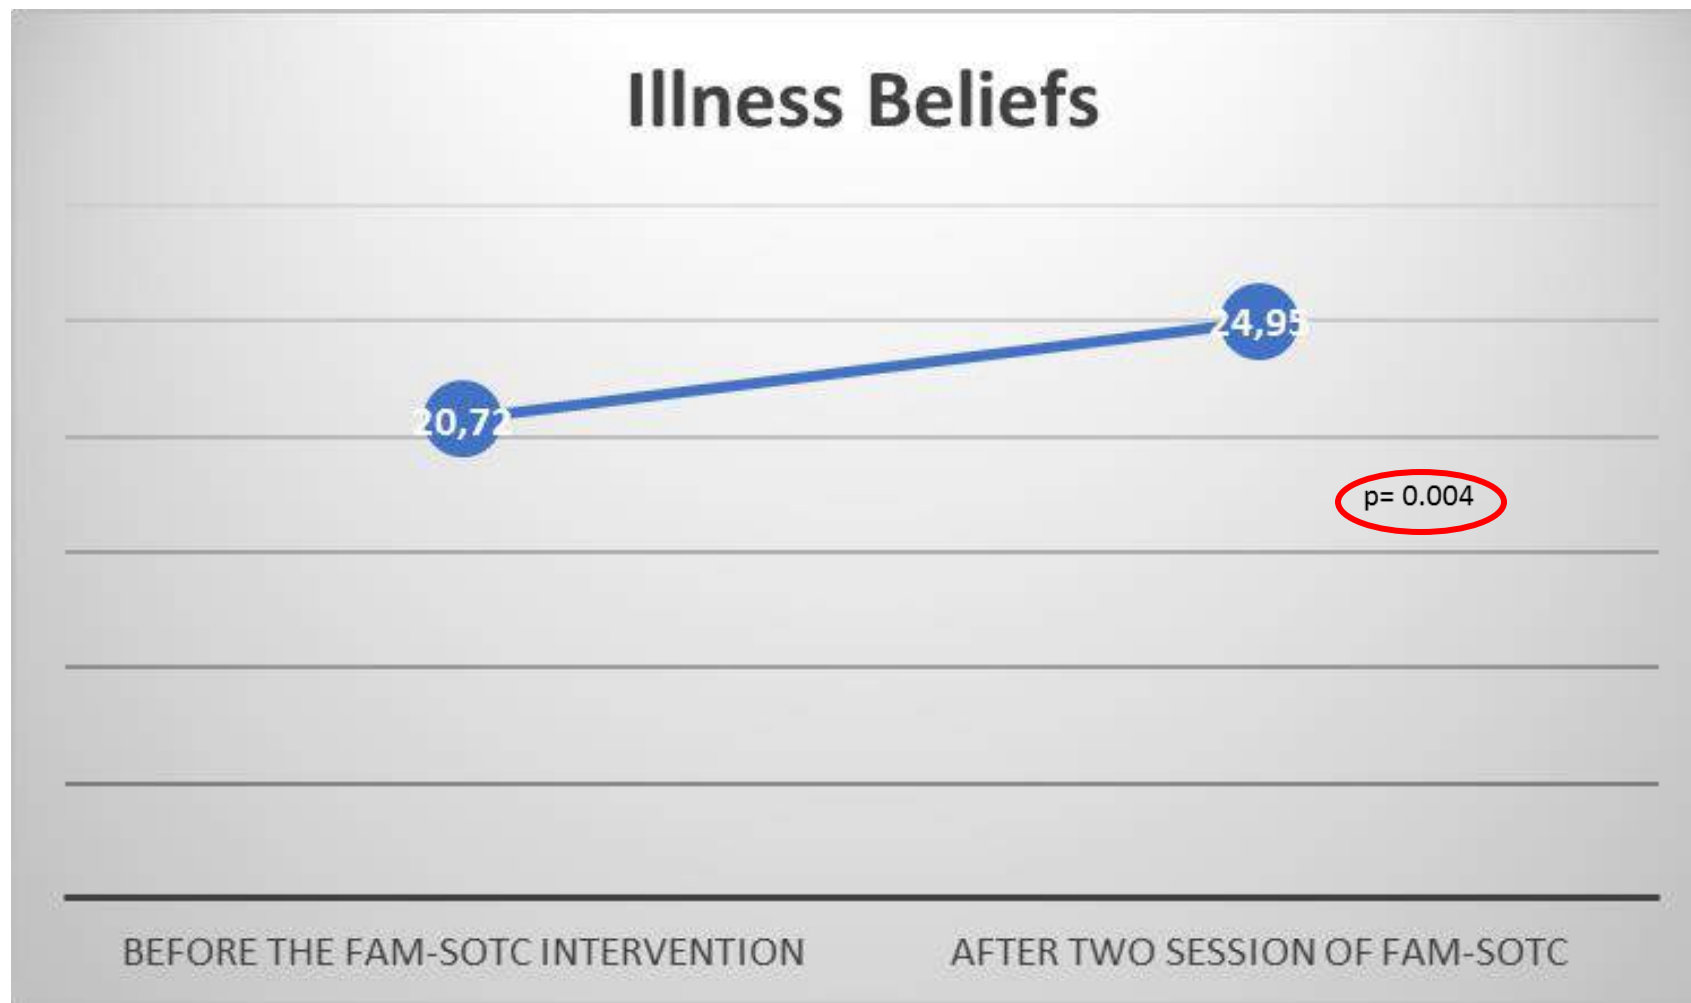

Perceived Family Support	Before the FAM-SOTC intervention				After two sessions of FAM-SOTC intervention				t-value	p-value	
	Caregivers outcome	n	Mean	SD	df	n	Mean	SD			df
Perceived Family Support (total)		30	33,17	17,36	29	30	51,53	17,23	29	-6.055	0,000
Cognitive Support		33	14,36	6,88	32	33	19,61	6,1	32	-5.344	0,000
Emotional Support		30	19,71	11,53	29	30	32,39	11,52	31	-5.992	0,000

Perceived family support before and after two sessions of FAM-SOTC

## RESULTS

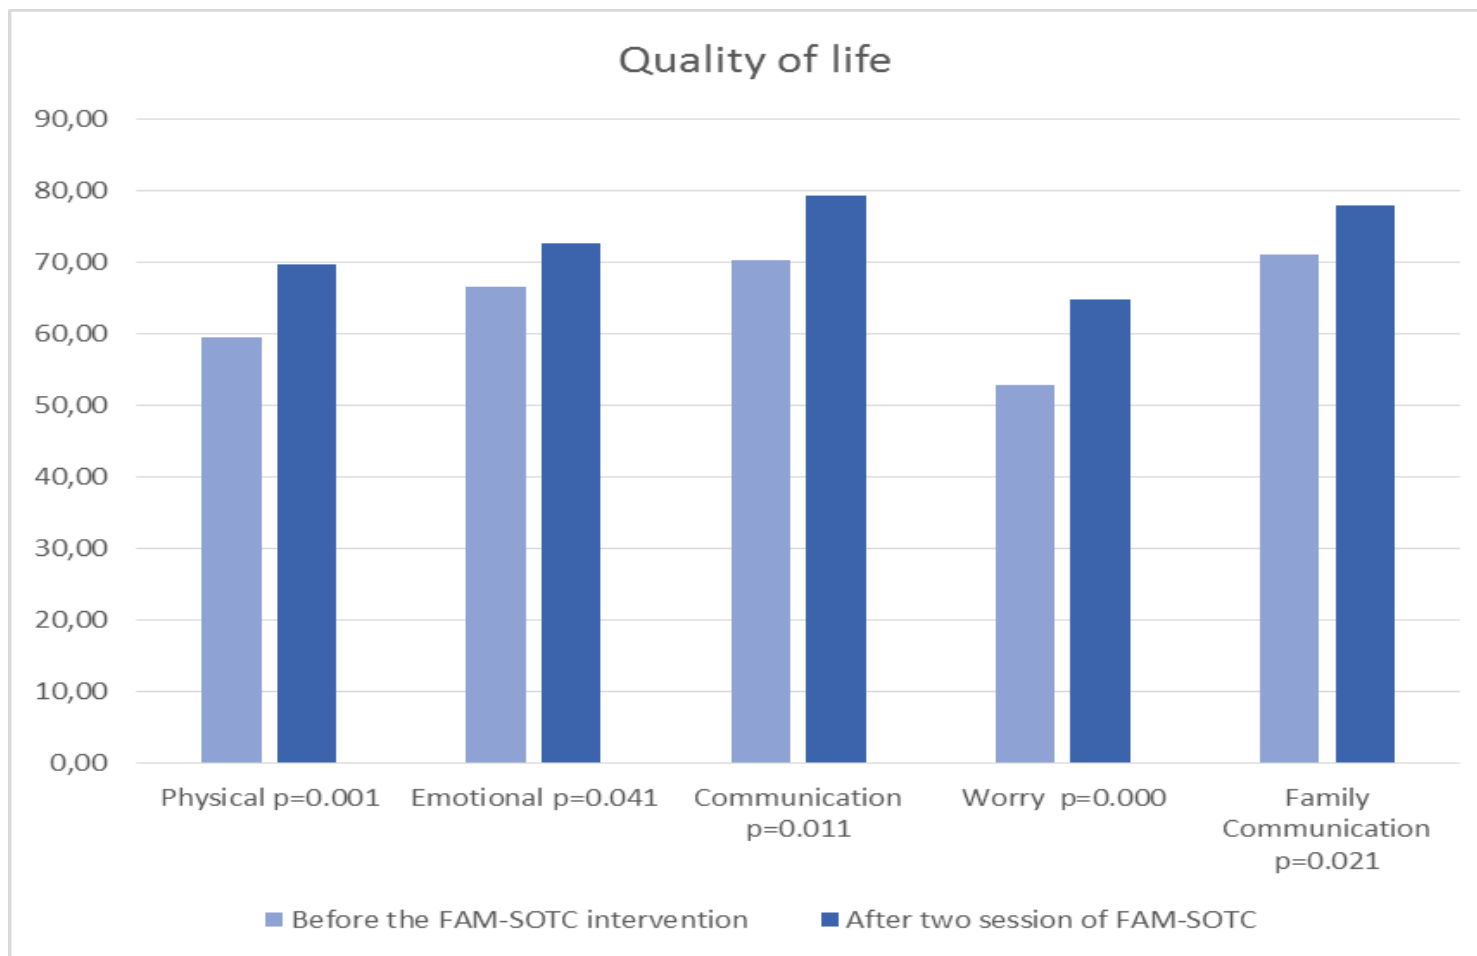

# RESULTS

Family Quality of Life	Before the FAM-SOTC intervention				After the FAM-SOTC intervention				t-value	p-value
	Caregivers outcome	n	Mean	SD	df	n	Mean	SD		
Physical	38	59,56	26,61	37	38	69,74	28,76	37	-3.476	0,001
Emotional	37	66,49	22,23	36	37	72,57	22,32	36	-2.125	0,041
Social	38	73,52	24,98	37	38	78,62	25,77	38	-1.727	0,092
Cognitive	38	68,19	28,26	37	38	70,00	29,41	38	-0,586	0,562
Communication	37	70,27	24,96	36	37	79,28	19,7	37	-2.668	0,011
Worry	38	52,76	23,56	37	38	64,80	19,26	37	-5.387	0,000
Daily Activities	38	63,38	31,63	37	38	69,08	32,3	37	-1.737	0,091
Family Communication	38	71,18	23,49	37	38	77,89	23,87	37	-2.420	0,021
Total	38	65,26	21,8	37	38	72,43	22,22	37	-3.681	0,001

Quality of life score before and after two sessions of FAM-SOTC

# RESULTS

## CONCLUSION

Family Strength Oriented Therapeutic Conversation (FAM-SOTC) is promising

Increased quality of life

Increased support

- Cognitive
- Emotionally

Positive change in Illness beliefs

Considerate and well prepared nursing interventions focusing on family strengths makes a difference!
